

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is actually an apparatus made out of high quality materials designed to endure the most demanding operations and work environments. This particular piece of equipment can enable the one driving to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and placement in a faster and more effective manner.

The fork pocket is quite unique and enables the one operating it to securely sway the forks into position without any fear of destroying the positioning cylinders. This allows the operator the choice to execute simultaneous or independent fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into fork positioners on existing units.
